SUDDEN ADULT DEATH SYNDROME- SCREENING

Sudden Adult Death Syndrome has struck a number of young people in N.Ireland. Though there is currently no test that can give a 100% guarantee that this will not strike, doctors agree that an electrocardiogram (ECG) can significantly reduce the risk.

CRCNI have been testing young members of sports clubs across the Province at a cost of £35 per person. This cost includes the ECG and a breathing test to check the lungs. Both tests are painless and quick to perform. We are in discussion with your club to carry out cardiac screening of club members in a venue close to your locality. The test is carried out by trained personnel and interpreted by a Clinical Physiologist who can discuss any health issues with you.

There is no upper age limit.....we are happy to check out Mum and Dad as well, but children should be aged 5 years or over to be tested.

We would be happy to hear from you by email, rosie@crcni.co.uk or by phone 02890511276 leaving us a message with just a name and number, so that we can phone you back to arrange your appointment.

Most of the testing is done in the evenings so that you don't have to take time off work or school to attend.

Let us help put your mind at rest.
